Languages & Technologies

Languages: TypeScript, JavaScript, Go, Python, Rust, SQL, Bash, Java, C

Backend & Platform: Temporal, Node.js, REST, GraphQL, gRPC, WebSockets

Infrastructure: Kubernetes, Docker, Helm, Terraform, Pulumi, AWS, GCP

Data & Security: PostgreSQL, Redis, Kafka, ClickHouse, Quickwit, Prometheus, gVisor, nsjail

Experience

Retool

July 2023 - Present

Software Engineer

San Francisco, CA

- Built Temporal-backed orchestration for Retool Agents, supporting **50K+ durable agent workflows/month** by modeling retries, timeouts, cancellation, and idempotent state transitions
- Shipped hardened sandboxing for agent execution with **nsjail** and **gVisor**, isolating filesystem, network, process, and syscall access for untrusted tool workloads
- Improved response times on core product routes from **2s to 200ms** by introducing caching, eliminating inefficient async patterns, and optimizing PostgreSQL queries
- Led migration from Datadog to a self-hosted observability stack, saving **\$750K+** annually while preserving production metrics, logs, traces, and alerting coverage
- Built a telemetry agent for on-prem deployments, reducing enterprise support investigations by an estimated **30%** by surfacing customer health, usage, and deployment diagnostics
- Engineered an endpoint ownership system for **100+ services and routes**, reducing on-call triage time by routing production incidents to the correct service owners
- Drove rollout and platform customizations for Apple and NBCU, supporting **\$2.5M+ ARR** by extending deployment, observability, and enterprise integration paths

Snapchat

May 2022 - August 2022

Software Engineer Intern

Toronto, ON

- Implemented hybrid encryption workflows on AWS and GCP, securing sensitive data for **100M+ users** through cloud KMS integrations and envelope encryption
- Built a backend service handling **1.7M+ requests/day** for model-training data processing, improving input quality for AR filter training pipelines

Bonsai

Jan 2021 - August 2021

Software Developer Intern

Toronto, ON

- Engineered an external order-fulfillment system that processed over **\$1.6M** in volume within 2 months by integrating partner APIs, inventory sync, and checkout flows
- Built partner-facing dashboard features in React and TypeScript, accelerating merchant operations with search, filtering, exports, and product verification workflows
- Led migration of an embedded e-commerce widget from React to Preact, improving page load performance by reducing client-side bundle size

Education

Queen's University

September 2019 - May 2023

Bachelor of Computing (Honours) in Software Design

Kingston, ON

- **Awards:** Ratehub.ca Award in Computing, Dean's Honour List × 4
