

Kunalan Kevin Subagaran

kunalan.k.subagaran@gmail.com | [linkedin.com/in/knlInks/](https://www.linkedin.com/in/knlInks/) | github.com/KnlInKS

Technical Skills

Infrastructure: Docker, Kubernetes, Helm, Terraform, Pulumi, AWS, GCP, Vercel
Observability & Data: Grafana, Prometheus, Mimir, Quickwit, Vector, Alloy, Clickhouse, Kafka
Languages: Python, Go, TypeScript/JavaScript, Bash, SQL, Java, Rust, C
Databases & Storage: PostgreSQL, Redis, DynamoDB, MongoDB
Backend & APIs: Node.js, Express.js, Flask, Gin, gRPC, REST, GraphQL, Websockets
Frontend & UI: React, Next.js, Tailwind, Svelte, ShadCN
AI & Tooling: Claude, Git

Experience

- Retool** July 2023 - Present
Software Engineer San Francisco, CA
 - Led migration from Datadog to a self-hosted observability stack (Grafana, Prometheus/Mimir, Quickwit), saving **\$750K+** annually
 - Designed and shipped a high-throughput metrics pipeline processing **5M+ events/day**, replacing Amplitude with a self-service internal tool enabling teams to independently instrument and analyze data
 - Built a telemetry agent for on-prem deployments, enabling real-time monitoring of system health, usage patterns, and proactive issue detection for support engineers
 - Engineered a service ownership and routing system that automatically triages alerts to correct on-call teams, reducing operational burden and improving incident response times
 - Optimized core infrastructure response times from **2s to 200ms** through caching layer implementation, async pattern improvements, and database query optimization
 - Established org-wide reliability standards and automated error tracking, reducing application crashes by **95%**
 - Drove platform rollout and infrastructure customizations for enterprise deployments (Apple, NBCU), representing **\$2.5M+ ARR**
- Snapchat** May 2022 - August 2022
Software Engineer Intern Toronto, ON
 - Designed and implemented cross-cloud (AWS, GCP) infrastructure workflows handling encryption and secure data processing at scale for **100M+ users**
 - Built an ML data processing pipeline handling **1.7M+ requests/day**, serving as infrastructure for model training data ingestion and improving training data quality for production ML models
- Bonsai** Jan 2021 - August 2021
Software Engineer Intern Toronto, ON
 - Automated deployment of Google Cloud infrastructure and database clusters using Terraform, eliminating manual provisioning
 - Reduced Docker image sizes by over **90%** with multistage builds, lowering storage costs and accelerating deployment pipelines
 - Optimized CI/CD workflows by migrating to Yarn V2 with local caching, reducing build times by **18 minutes**
 - Engineered an external order-fulfillment system that processed over **\$1.6M** in volume within 2 months
 - Built partner-facing dashboard features in React, including search, filtering, exports, and product verification

Projects

- Jobby** | Go, PostgreSQL, Webhooks
 - Built and operated a platform serving **100K+ users**, partnering with Simplify (YC Startup)
- Resume Parser** | Next.js, TypeScript, Redis, Vercel
 - Built and scaled a high-traffic tool to **1.5M+ page views**, using Redis caching and edge deployment on Vercel

Education

- Queen's University** September 2019 - May 2023
Bachelor of Computing (Honours) in Software Design Kingston, ON
 - Awards:** Ratehub.ca Award in Computing, Dean's Honour List x 4
